Molecular & Genetic Genetics

Founded in 1908 as *Zeitschrift für induktive Abstammungs- und Vererbungslehre*. From Vol. 89 (1958) to Vol. 98 (1966) published under the title *Zeitschrift für Vererbungslehre*, as of Vol. 99 (1967) under the title *Molecular & General Genetics*.

From Vol. 1 (1908) to 81 (1944), published by Gebr. Bornträger, Berlin; Vol. 82 (1948) and subsequent volumes, Springer Berlin.

Submission of a manuscript implies: that the work described has not been published before (except in the form of an abstract or as part of a published lecture, review, or thesis); that it is not under consideration for publication elsewhere; that its publication has been approved by all coauthors, if any, as well as by the responsible authorities at the institute where the work has been carried out; that, if and when the manuscript is accepted for publication, the authors agree to automatic transfer of the copyright to the publisher; and that the manuscript will not be published elsewhere in any language without the consent of the copyright holders.

All articles published in this journal are protected by copyright, which covers the exclusive rights to reproduce and distribute the article (e.g., as offprints), as well as all translation rights. No material published in this journal may be reproduced photographically or stored on microfilm, in electronic data bases, video disks, etc., without first obtaining written permission from the publisher.

The use of general descriptive names, trade names, trademarks, etc., in this publication, even if not specifically identified, does not imply that these names are not protected by the relevant laws and regulations.

While the advice and information in this journal is believed to be true and accurate at the date of its going to press, neither the authors, the editors, nor the publisher can accept any legal responsibility for any errors or omissions that may be made. The publisher makes no warranty, express or implied, with respect to the material contained herein.

Special regulations for photocopies in the USA: Photocopies may be made for personal in-house use beyond the limitations stipulated under Section 107 or 108 of U.S. Copyright Law provided a fee is paid. This fee is US \$ 0.20 per page, or a minimum of US \$1.00 if an article contains fewer than five pages. All fees should be paid to the Copyright Clearance Center, Inc., Congress Street, Salem, MA 01970, USA, stating the ISSN 0026-8925, the volume, and the first and last page numbers of each article copied. The copyright owner's consent does not include copying for general distribution, promotion, new works, or resale. In these cases, specific written permission must first be obtained from the publisher.

 Zsindely A → Schablik M 140

Indexed in *Current Contents*

Instructions to authors

Manuscripts should be sent in triplicate to one of the editors representing the discipline involved (for addresses see back cover page).

Authors are requested to prepare manuscripts in accordance with the accepted practice in the journal.

1. Manuscripts should be typed in double-line spacing with wide margins on one side of the paper only. Form and content should be carefully checked to exclude the need for corrections in proof. A charge will be made for changes introduced after the manuscript has been set in type. In view of the international readership of the journal, papers must be submitted in English. Springer-Verlag will have papers language-edited if necessary, usually free of charge.

2. The title page should comprise: title of paper, first name(s) and surname(s) of author(s), institute, any footnotes referring to the title (indicated by asterisks), address to which proofs should be sent.

3. Summary. Each paper should be preceded by a short summary. If important experimental results are shown in the figures, please include this information in the summary.

4. Immediately after the summary up to five **Key words** should be provided.

5. Genus or species names, gene symbols, mathematical formulae, and any other words to be given special emphasis should be underlined once for *italics*. Similar signs have to be clearly distinguished, e.g., 1 (one) and l (letter), or 0 (zero) and O (letter).

6. Abbreviations should follow the rules and recommendations of the IUPAC-IUB Commission on Biochemical Nomenclature (CBN) and of the IUB Commission of Editors of Biochemical Journals (CEBJ).

7. Footnotes, other than those referring to the title, should be numbered consecutively.

8. References. Only works that are cited in the text and that have been accepted for publication should be listed at the end of the paper in alphabetical order under the first author's name. Works by two authors should be listed alphabetically according to the second author's name. Works by three or more authors should be listed chronologically. If there is more than one work by the same author or team of authors in the same year, a, b, c, etc. is added to the year both in the text and in the list of references. Internationally accepted abbreviations of journal titles should be used.

Examples:

Bächi B, Arber W (1977) Physical mapping of *Bgl*III, *Bam*HI, *Eco*RI, *Hind*III and *Pst*I restriction fragment of bacteriophage P1 DNA. *Mol Gen Genet* 153:311–324

Herbert D, Phipps RJ (1971) Chemical analysis of microbial cells. In: Norris JR, Ribbons DW (eds) *Methods in microbiology*, vol 5B. Academic Press, New York, p 209

Citations in the text should be by author and year. Where there are two authors, both should be named; when a work by more than two authors is mentioned, only the first author's name plus 'et al.' need be given.

9. Figures should not be regarded as mere illustrations but restricted to the *minimum needed* to clarify the text. Each figure should have a short legend and the legends should be submitted on a separate sheet. Information given in legends should not be repeated in the text and, similarly, the same data should not be presented in both graph and table form. Previously published illustrations are not usually accepted.

Color illustrations will be accepted; however, the authors will be expected

to make a contribution (approximately DM 900.00 per page) to the additional costs involved.

All figures, whether photographs, graphs, or diagrams, should be numbered consecutively throughout and submitted on separate sheets. The top of the figure, the author, and the figure number should be written lightly in soft pencil on the back of each.

The figures should either match the size of the column width (8.6 cm) or the printing area (17.7×24.1 cm). Several figures should be grouped into a plate on one page (17.7×24.1 cm). If figures are mounted on flexible white drawing paper, for technical reasons the paper should not exceed 0.4 mm in thickness and about 300 g/m² in weight.

Line drawings. Please submit good-quality glossy prints in the desired final size. The inscriptions should be clearly legible. Letters 2 mm high are recommended.

Half-tone illustrations. Please submit well-contrasted photographic prints, trimmed at right angles and in the desired final size. Inscriptions should be about 3 mm high.

10. Tables should be submitted on separate sheets. Each table should have a short title.

11. Brief accounts of particularly interesting results will be printed out of turn as **Short communications**. They should not exceed 3 or at the most 4 printed pages, including a table or figure, should this be necessary. The editors reserve the right to decide what constitutes a Short communications.

12. Offprints. Fifty (50) offprints of each paper are supplied free of charge.

13. Excess charges. Each paper is limited to six printed pages (18 manuscript pages, including figures and tables); thereafter, there will be a charge of DM 150.00 for each page exceeding this limit.

To Infinity and Beyond

A Cultural History of the Infinite

1987. 288 pages, Hardcover
ISBN 3-7643-3325-1
sFr. 98.-/DM 118.-

In a fascinating narrative, the author examines the role of infinity in mathematics and geometry and discusses its cultural impact on the arts and sciences. For the scientist or artist, for the historian or educated layman, this is a marvelous trip through the history of the infinite.

«A Pro Scientia Viva Title»

Each essay is unique. Some are witty and entertaining; others more serious and controversial. All are exciting and compelling. They bring to life the observations and thoughts of a man who has excelled for decades as a scientist and who is now hailed as "one of the wisest and most eloquent essayists now writing in English."

sFr. 48.-/DM 58.-

"Professor Klotz's name is familiar to all protein chemists, and generations of science students were brought up on his celebrated textbook of chemical thermodynamics. He now reveals himself as a writer of wit, wisdom, and originality in a different genre. This admirable little book will give much pleasure"

«A Pro Scientia Viva Title»

"It is a great achievement to write on this subject so as to fascinate, delight, and inform the reader; Dr. Squires has done just that... So horribly and entertainingly does he expose the inadequacies of the present system, that radical reform seems essential... After the first reading, this is a book for the bedside, to be dipped into from time to time"

Spermatogenesis Genetic Aspects

Edited by W. Hennig

Springer-Verlag

1987. 25 figures. IX,
130 pages. (Results
and Problems in Cell
Differentiation,
Volume 15).
Hard cover DM 98,-.
ISBN 3-540-17959-3

Contents: *M. A. Handel:* Genetic Control of Spermatogenesis in Mice: Introduction. - Genetic Conditions Affecting Spermatogenesis. - Chromosome Anomalies Affecting Spermatogenesis. - Structure and Role of the Sex Chromosomes in Spermatogenesis. - Overview of Molecular Events of Spermatogenesis. - Haploid Gene Action During Spermatogenesis. - Resumé and Prospectus. - References. - *J. H. P. Hackstein:* Spermatogenesis in *Drosophila*: Introduction. - The Genetic Requirements for Spermatogenesis. - The Y Chromosome. - Conclusions. - References. - *J. Kimble:* Genetic Control of Sex Determination in the Germ Line of *C. elegans*: Introduction. - Background. - Control of the Sperm/Oocyte Decision. - Conclusions. - Subject Index.

This book gives an up-to-date account of chromosome research. Various aspects are combined to furnish a comprehensive survey of classical genetics, cytological findings and recent molecular biological evidence. Leading experts of various fields of research contributed to this overview, therefore, this is a widely applicable and useful source for teaching and research.

Temporal and Spatial Regulation of Plant Genes

(Plant Gene Research,
the fifth volume)

1988. 55 figures.
Approx. 350 pages.
Cloth DM 194,-,
6S 1360,-
ISBN 3-211-82046-9

Genes expressed in different plant organs and processes are discussed with the emphasis on identifying various regulatory circuits controlling plant gene expression in a temporal and spatial manner. Regulation of foreign genes in transgenic plants is addressed with respect to a number of agriculturally important traits. This book illustrates the complexity of gene expression in plants and outlines strategies towards manipulating specific genes of interest.

Contents: *Arabidopsis* as a Tool for the Identification of Genes Involved in Plant Development. - Regulation of Gene Expression During Seed Germination and Postgerminative Development. - Genes Involved

in the Patterns of Maize Leaf Cell Division. - Molecular Analysis of Genes Determining Spatial Patterns in *Antirrhinum majus*. - Isolation of Differentially Expressed Genes from Tomato Flowers. - Anther and Pollen-Expressed Genes. - Self-Incompatibility Genes in Flowering Plants. - Regulatory Circuits of Light-Responsive Genes. - Regulation of Gene Expression by Ethylene. - Root Nodule Symbiosis:

Nodulins and Nodulin Genes. - Structure and Expression of Plant Genes Encoding Pathogenesis-Related Proteins. - Proteinase Inhibitor Gene Families: Tissue Specificity and Regulation. - Cell Wall Extensin Genes. - The Expression of Heat Shock Genes - A Model for Environmental Stress Response. - Protein Transport in Plant Cells. - Genetic Engineering of Herbicide Resistance Genes. - Virus Cross-Protection in Transgenic Plants. - Subject Index.

Global Bifurcation of Periodic Solutions with Symmetry

1988. VIII, 144 pages. Soft cover DM 28,50. ISBN 3-540-19234-4

Contents: Introduction. – Main Results. – No Symmetry – A Survey. – Virtual Symmetry. – Generic Local Theory. – Generic Global Theory. – General Global Theory. – Applications. – Discussion. – Appendix on Genericity. – References. – Subject Index.

Mathematical methods shown in this book include bifurcation theory, transversality theory, and generic approximations. Besides mathematical techniques, the book contains 5 largely nontechnical chapters. The first three outline the main questions, results and methods. A detailed discussion pursues theoretical consequences and open problems.

Results are illustrated by a variety of applications including coupled oscillators and rotating waves; these links to such disciplines as theoretical biology, chemistry, fluid dynamics, physics and their engineering counterparts make the book directly accessible to a wider audience.

Oncogenes and Growth Control

Edited by
Patricia Kahn and Thomas Graf

Springer-Verlag

P. Kahn, T. Graf, Heidelberg (Eds.)

Oncogenes and Growth Control

First edition. 1986. Second printing. 1988. 35 figures. XXIII, 369 pages.
Soft cover DM 59,-. ISBN 3-540-18760-X

From the reviews: "... **Oncogenes and Growth Control** is valuable because it furnishes an overview of the expansive area of oncogene research and its integration with research on the regulation of growth and differentiation. The 'mini-review' format with its emphasis on summary tables that give a lot of information in a relatively small space is a nice change from the more conventional form of review."

Science

How is growth controlled in normal cells? How are the growth control mechanisms perturbed in cancer cells? This book provides an up-to-date description of research aimed at resolving these questions. The general headings are: growth factors, receptors, and related oncogenes; transduction of mitogenic signals and *ras* oncogenes; nuclear oncogenes and regulation of gene expression; and multiple steps involved in malignant transformation. The articles emphasize concepts rather than detailed facts and are intended not only for specialists in the field but also for interested readers, such as physicians and advanced students.
